A letter of thanks to all the wonderful people at Alumco for a job well done.

Let's just call it a blessing that we found Alumco in 1997. We had a new tool in mind. This tool was for the racing industry and was so new, there was nothing to copy from. We started with rough drawings and went from one machine shop to the next trying to find the right one to do the machine work. We then discovered Alumco.

With the help of Charles and his knowledge of the computer, our tool was perfected and made to look very professional. Thanks to the precision machine work our tool will now work efficiently.

Quality control can be found in all areas of your company, from the office help, to the crews that run the CNC Machines in the back, to the final stage of packaging and shipping of the finished product. We have always received our orders as promised and at fair prices.

We are getting a lot of compliments on our tool for what it does and a lot of compliments on the excellent machine work. Thank you for being there for us.

Sincerely,

Paul H. Nieman
